I am available anytime. I think Dean is working remotely until 10:00. Below is the proposed response to the Juneau County Health Department's invitation to attend their informational meeting.

Thank you for the invitation to attend your educational session at Necedah Town Hall on July 17, 2018. You invited EPA to present the results of recent sampling that EPA has done in northeast Juneau County. EPA does not plan on attending. All the individual well owners have already received the analytical results of samples collected from their wells and they have been provided informational resources to answer questions related to their results. The sampling results from the public road right-of-ways are still being compiled and analyzed. We will also need to complete that analysis and

coordinate with Wisconsin DNR before releasing the data. It is our desire to release the data to the public as soon as possible. Thank you for the opportunity to participate in the educational session.

We think this message is appropriate because on the timing. We could likely have the data ready for WDNR next week and schedule a call/meeting the following week to discuss the next steps after they have had a few days to review it.

Thanks. For Central Sands, could we do a short consult on what data is showing and next steps? I know you're out tomorrow – let me know if I could confer with someone else?

Hi, Jim. Please see the message below regarding release of the groundwater data to DNR and the public. Are you ok with this approach and do you want to review

the
website that Jennifer Ostermeier is working on with Dean Maraldo?

Linda

Linda – It looks like we will be ready to share the full groundwater data (41 borings on public right-of-way) with the public soon. To do so, we are creating a website. As discussed earlier, WDNR wanted the data prior to release. To do that, we could give Wisconsin access to the website a week before it goes live. **Does that sound ok?** It looks like we will be ready to share it next week sometime.

We will not include the private well data on the website. Those people have been notified directly.
